Stenomask - A Bit of History

STENO for the BLIND (May, 1954)

STENO for the BLIND

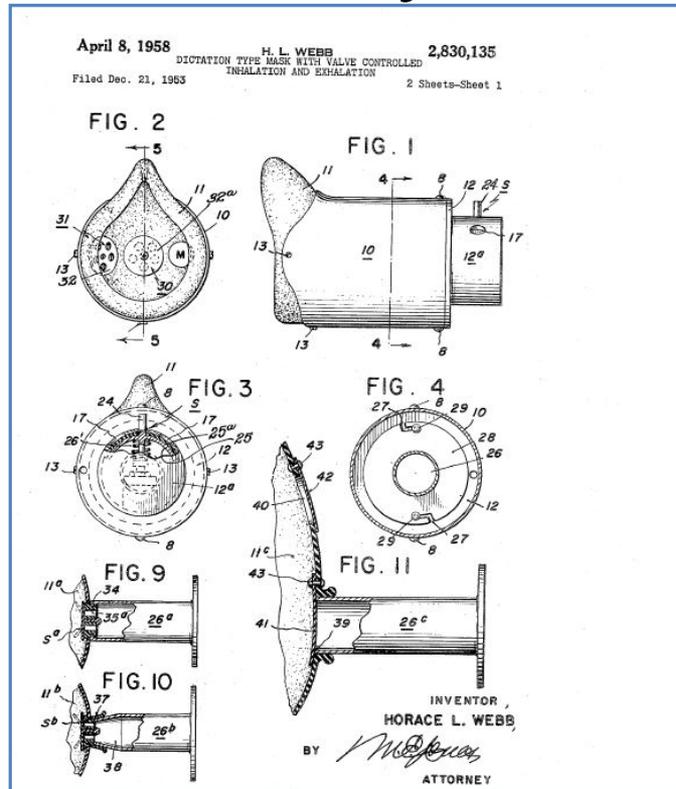

THE Stenomask, a silent microphone that can be attached to most office dictating machines, enables the blind to take dictation faster than the average person using shorthand. With it, the stenographer merely repeats the words of the speaker into the mouthpiece, which completely silences her own voice. The dictating machine in turn records her voice, playing it back later for transcription. Invented by Horace L. Webb, president of Talk, Inc.

Steno-microphone enables a blind person to take dictation orally through most dictating machines.

Here the stenographer holds the mask against her face, repeating the words of the speaker into it.

Mouthpieces

SS1 Silicon Mouthpiece for stenomasks

Price: **\$24.00**
SKU: 373
Brand: [Martel](#)
Availability: IN-STOCK
Shipping: **FREE** for orders over \$49

Quantity: [Add to Cart](#)

[Description](#) [Reviews](#) [Accessories](#)

Standard size silicon mouth piece. For use with all Martel steno mini masks. The surgical grade silicon prevents irritation and is hypo-allergenic. Easy to clean and bacterial resistant.

Silicon mouthpiece that comes standard with all Martel masks

FM1 Full Face Mouthpiece for stenomask

Price: **\$39.95**
SKU: 1216
Brand: [Martel](#)
Condition: New
Rating: ★★★★★ (1 product review)
Availability: IN-STOCK
Shipping: **FREE** for orders over \$49

Quantity: [Add to Cart](#)

[Description](#) [Reviews](#) [Accessories](#)

The new Mini Mask Full Face Piece by Martel allows you to turn your Mini Mask into a full face stenomask. Covering both your mouth and your nose, sound is deadened even more than normal. It is made from non-allergenic silicon, so no worries about irritation. This is a must have accessory for the realtime court reporter who is using Dragon Voice recognition.

Full face mouthpiece is an accessory product

SS4 Soft Seal Leather Mouthpiece for stenomasks

Price: **\$39.99**
SKU: 372
Brand: [Martel](#)
Availability: IN-STOCK
Shipping: **FREE** for orders over \$49

Quantity: [Add to Cart](#)

[Description](#) [Reviews](#) [Accessories](#)

The soft seal mouth piece greatly increases comfort for all day users of the mini mask. In addition, the soft seal makes a 30% better seal to your face, quieting your voice even more. Exclusively from Martel Electronics

Leather mousepiece is soft and cushiony. Website says it makes a better seal. Have seen folks adapt this to the TalkTech.

AudioScribe

<https://audioscribe.com/portfolio-item/accuspeak/>

“The **AccuSpeak dictation mask** was designed by The AudioScribe Corporation after eight years of repairing other dictation masks. It was specifically designed to add strengths where other masks often needed repairs. These advancements improve the reliability and sound quality of our masks. The AccuSpeak mask uses a ventilation tube that facilitates a constant flow of air. Some of the other masks available on the market rely on valves that can fail or ventilation holes that can whistle; both allowing sound to escape, or worse – make more sound. Another way we have minimized mask sound is to point the ventilation tube downward toward the floor and not forward into the room.”

AudioScribe

Seals - <https://audioscribe.com/portfolio-item/mask-seals/>

Soft Seal - AccuSpeak & Martel Only Cost: \$30.00 USD

Black Over the Nose - AccuSpeak & Martel Only Cost: \$30.00 USD

Small Gray Seal - AccuSpeak, Talk Tech or Martel Cost: \$30.00 USD

Over the Nose Gray Seal - AccuSpeak, Talk Tech or Martel Mask Cost: \$35.00 USD

AccuSpeak mask photo shows it without a seal. The purchaser gets their choice of one seal. Seals are also sold separately.

AudioScribe has a unique gel seal.

Muffle Mitts

2 sizes:

Talk Tech Classic (old style)

Talk Tech Steno SR (new style, eVerbatim & VoxRite, others may have)

Martel & Accuspeak

There are many sites that sell masks also sell muffle mitts - won't list them all here.

Doubled up!

Customizing

Try a different brand mouthpiece on your mask

Let's face it, not one size fits all. Reporters may have a favorite mouthpiece that doesn't come with their preferred mask. It may take a bit of manipulation, but you can get *most* any mouthpiece to fit *most* masks.

"Debbie Villien This is what I do: cut the top part of the TT facepiece off so you have a tad over 1/2 inch left of the bottom part which fits onto the mask. (either one works, the regular or over the nose facepiece) Place that on the mask, then maneuver/work the SoftSeal on..it definitely takes some effort, and possibly some choice words I have mine cut so you can't see the grey of the facepiece once the SoftSeal is on. I don't want too much extra, I think it makes it more secure. I've been doing this since the original TalkTech came out, and I've never had a problem with them coming loose. I also pinch the top part of the SoftSeal where my nose is, and stitch it a few times, so I can breathe. I put moleskin around mine for comfort/so it doesn't make me sweat. I'll post a couple of pics in a minute (please excuse the makeup, This is an older one that I took apart for a demonstration) Last pic is some else's version of putting a padded mask on a TT.

Look what I made. I tried the band for hands-free and it was just too uncomfortable for me. Then I tried the monster clamp and attaching the mask with Velcro. The clamp did not stay in place whenever I applied any pressure forward on the mask, and the bendable thingy didn't stay in place either. So I saw this desk lamp what has a huge clamp and a really sturdy bendy thingy. Attached the mask under the lamp part with Velcro, then wrapped with electrical tape and put a "specially-cut sock" around the whole thing. Works great. I can really lean into it and remove my hands to work on computer at the same time. Found the lamp at ACE Hardware. It is battery-operated so no electric cords. The lamp was \$29.99.

Get creative and make your own!

Hands-Free

Microphones & Headsets

(in no particular order)

Some Considerations:

1. Separate mic and sound – or – integrated headset/microhpone
 2. USB or 1/8” male jack
 3. Will audio always come from computer with Dragon or possibly elsewhere
 4. Cost
 5. Comfort & durability
 6. Customer service
 7. Reputable dealer & reputable product
 8. Microphone flexibility, placement, movement
 9. Headsets, one or two ears; in-ear or-over ear
 10. Do you want to hear what else is going on in the room
 11. Headsets, noise cancelling

Voice Writers Wish List ♥ 1

Voice Writers Wish List

Recording 2nd Audio Source to CAT

To record the audio from a computer (not the room), it needs to have the sound come from a *microphone input*. You need to take what you hear on your headset and figure out how to turn that into a microphone input. Our #1 audio mic input to our computer is the headset microphone that you speak into for Dragon. But that's not what you want to record; you want the speaker's voice. Makes it so easy to spot-check right where you want to. I personally prefer using two computers.

SCENARIO 1 – Using 2 Computers

1. The first computer has Dragon and CAT software. The meeting or class audio is coming from the second computer. You will need to split or duplicate the audio from Computer #2 out so you can listen from one and send the other one to your CAT computer. I like a Boostaroo because it not only gives me an extra "out" audio port, but you can also boost the sound in case you have a soft-spoken presenter <https://www.amazon.com/dp/B00FZZ8N5O/?encoding=UTF8?coliid=I1LHYXJZFXCTL0&colid=LIANDCN19YRZ&psc=0>
2. Using a male-to-male audio cable, plug one end into the Bostaroo (or splitter) and plug the other into a sound pod. It will be simpler if you use a sound pod of a different brand than you do for Dragon, so it is easily identifiable which is which. Plug that sound pod USB into an available port on your computer. Your software will now recognize that you have two different microphones.

or

Recording 2nd Audio Source to CAT

SCENARIO 2 – Using 1 Computer

You will need to set up Windows have two audio outputs from your volume mixer. Generally you tell your computer you want to listen from your speakers or a headset, not both. For this to work, you need to listen from two audio outputs, called a “Stereo Mix” by Windows. (This doesn’t apply if you get your sound from a second computer.) Here’s two YouTube videos explaining how to do that.

<https://www.youtube.com/watch?v=9zvezLmCDBI>

https://www.youtube.com/watch?v=LV46UXLsVW4&index=1&t=50s&list=LLyEvZX64_52MbVRTWy67mBA

Once you have the dual audio output set up, you then would plug the 3.5mm male/male cable

https://www.amazon.com/dp/B001O5J47U/_encoding=UTF8?coliid=I2TE3ZQR6L113P&colid=LIANDCN19YRZ&psc=0) into your computer where you'd plug in regular analog headphones. Picture #1 shows my cheapo headphones - that's where you put one end of the male cable. The other end of the 3.5mm cable goes into a USB sound pod and plug that in, which your software will then recognize as microphone #2. (Picture #2 shows those 2 pieces). Ideally it should be a different brand than the other sound pod you are using.

The end result is that you have 2 audio in and 2 audio out. That's a lot of stuff going on for one computer, but it's doable with a powerful computer.

That's All!

It's Swap Time

THANKS!!!
